

Chapter 12 Test— Answer Key

Matching [Each correct answer is worth 1 point.]

In the statements below, the definitions and terms do not match.

Cross out the incorrect term and write the key term that matches the definition on the blank.

- The systematic inquiry into nature by means of observation, experiment, and theory construction is ~~scientism~~. science
- The belief that when it comes to scientific inquiry, no supernatural explanations can be invoked is the ~~anthropic principle~~. methodological naturalism
- The theory that the universe contains all the necessary properties that make the existence of intelligent life inevitable is ~~universal common descent~~. the anthropic principle
- The belief that soul and body are separate things is ~~science~~. dualism
- The belief that science is the best or only way to obtain reliable knowledge is ~~methodological naturalism~~. scientism
- The theory that all life on Earth originated from a single organism is ~~physicalism~~. universal common descent
- The belief that soul and body are ultimately one physical thing is ~~dualism~~. physicalism

Multiple Choice [Each correct answer is worth 1 point.]

Circle the correct answer(s) from the choices below. Some will have more than one answer.

- Which of the following are included in the seven steps of scientific inquiry?
 - Find a question to explore.**
 - Form a conclusion.**
 - Construct a hypothesis.**
 - Exclude viewpoints that don't fit your agenda.
 - Research by observing and investigating.**
 - Analyze the data from testing.**
 - Communicate your findings.**
- What terms or phrases belong with a description of the conflict view?
 - methodological naturalism**
 - no supernatural explanations**
 - a compatibility between religion and science
 - scientism**
 - science is the only way to obtain reliable knowledge**

10. Which descriptions best match the complementary view?
 - a. **It rejects scientism.**
 - b. **It is sometimes called the two-domain view.**
 - c. **Religion and science are both valuable.**
 - d. Science and faith can work together for mutual benefit.
 - e. **Science and religion are entirely separate realms.**

11. Which scientist caused a conflict in the Catholic Church regarding the sun and planets?
 - a. Copernicus
 - b. Brahe
 - c. Darwin
 - d. **Galileo**
 - e. All of the above

12. What lessons can we learn from the conflict with the Catholic Church mentioned above?
 - a. **A view accepted by the majority does not always mean it is correct.**
 - b. The majority rules when it comes to the religion and science.
 - c. **Changing the majority view takes time.**
 - d. The church is always right when it comes to the Bible.
 - e. **Rightly understood, science and the Bible do not conflict.**

True or False [Each question is worth 1 point.]

Indicate if each statement is true or false. If the statement is false, change the underlined word to make it true.

- F 13. The anthropic principle shows that the material universe is neither self-contained nor self-sustaining. quantum theory

- T 14. Darwin's theory that species can undergo radical changes over long periods of time, and eventually evolving into majorly different species is called macroevolution.

- F 15. Intelligent design theorists believe that the universe was created by God in six literal 24-hour days. Young-Earth creationists

- F 16. Acts 17:28 was a key verse in the development of the idea of natural laws that govern the universe and make science possible. Jeremiah 31:35–36

- F 17. Science focuses on explanation and cannot answer ethical questions. Faith is needed to help answer the why questions is a belief of the complementary view.
collaborative view

Fill-in-the-blank [Each answer is worth 2 points.]

Fill in the missing word(s) to complete each statement.

18. James 5:14–15 states, Is anyone among you sick? Let him call for the elders of the church, and let them pray over him, anointing him with oil in the name of the Lord. And the prayer of faith will save the one who is sick, and the Lord will raise him up. And if he has committed sins, he will be forgiven.
19. One key assumption that scientists must make is that the universe behaves in orderly and predictable ways.
20. Scientists must also assume that our minds can be trusted to help us gain true knowledge about the world.
21. Psalm 139:13–16 shows that God places a high value on human life.

Short Answer [Each question is worth 3 points.]

Answer the following questions using complete sentences.

22. Why is it unreasonable to expect the Bible to completely align with modern scientific views? **The biblical writers were not attempting to write a science textbook. They were not scientists, and they had neither the technical vocabulary nor the scientific instruments available to scientists today. They usually describe nature from the perspective of an unaided human observer.**
23. Explain two of the three myths that people believe about religion being a hindrance to science. **Answers should include two of the following: One myth is that after the fall of Rome, Christianity plunged the world into a thousand-year dark age in which science was unable to flourish. A second myth is that medieval theologians believed the earth was flat, rejecting clear evidence to the contrary. A third myth is that the pioneers of early modern science were skeptics who bucked church authority.**
24. What is the Christian explanation of when life begins and ends? **Scientific evidence makes it clear that life begins at conception. The Bible does not address this claim; but it does place a high value on human life even in its earliest stages. In Christian theology, death is not the way that things were supposed to be. Instead of considering artificial extension of life, or the premature ending of it, Christians believe that Christ defeated the great enemy on the cross and offers eternal life to all who accept him.**
25. How did John Wesley and William Whewell positively influence the scientific community? **Both men were great Christian examples of how to demonstrate a non-reactionary, collaborative approach.**

Essay [Each question is worth 5 points.]

Answer the following questions with at least one paragraph.

26. Explain the challenges in the conflict and complementary views.

One of the beliefs in the conflict view is scientism, which is self-refuting. It is a philosophical claim and cannot be demonstrated using the scientific method. Another problem for scientism is that scientific inquiry relies on several philosophical assumptions, which cannot be demonstrated from science. Finally, methodological naturalism arbitrarily limits the scope of knowledge, ruling out supernatural explanations before the evidence has been gathered. In the complementary view, since there can be no real conflict between science and Christianity, there cannot be any collaboration between the two either. Science cannot inform Christianity, and Christianity cannot inform science.

27. Do quantum theory, the anthropic principle, and time support the existence of God? Explain why or why not? **Quantum theory shows that the material universe is neither self-contained nor self-sustaining. It is dependent on outside, non-material forces. If this is true, then one cannot simply rule out God's existence or relevance to the universe. The anthropic principle says that the universe contains all the necessary properties that make the existence of intelligent life inevitable. The universe seems especially designed for human beings to explore it. Most physicists agree that we are moving forward through time from a fixed past toward and unknown future. The Bible reveals a God who is the Creator of time, which began at creation and will come to an end when the final judgment occurs.**

28. What are your beliefs about the origins of life? Explain why you have those beliefs. Include the view you hold and the theory you believe is true. Views: conflict, collaborative, or complementary. Theories: young-Earth creationism, old-Earth creationism, intelligent design, or theistic evolution/evolutionary creationism. **Answers will vary. Award points based on how well students defend their beliefs, not on the choice of beliefs themselves.**
